SKILLS

Languages TypeScript/JavaScript, Python, Go, SQL

Frontend React, Next.js, TailwindCSS, Redux, custom WebSocket/SSE clients

Backend Django, Go (gorilla/mux), Node.js/Express

Infra PostgreSQL, MongoDB, Redis, Docker, AWS, Terraform

Tools Git, CI/CD, Jira/Agile, Agentic AI workflows (Claude Code)

PROFESSIONAL EXPERIENCE

Jeff Martin Auctioneers, Full Stack Software Engineer

Apr 2024 – Jul 2026

14-service Go/Django/Next.js microservices platform · Work GitHub (private repos): github.com/ai-psoteropulos

- Designed and built a custom WebSocket/SSE client library from scratch across two Next.js applications after determining no maintained Socket.io implementation existed for Go — JWT-aware reconnection, exponential backoff, and dynamic transport selection for cost/security.
- Architected a code-generated inventory taxonomy system — Django models with inheritance mirroring the category hierarchy, DRF serializers, and a JSON attribute-schema system supporting attribute inheritance with per-category overrides and exclusions — for a multi-vertical marketplace with no existing structure, avoiding hand-maintenance of 1,900+ classes as requirements repeatedly changed.
- Spearheaded a code-quality initiative — linting/formatting (ruff, ESLint, pre-commit hooks) and Django testing infrastructure (pytest, factory_boy) — replacing years-old, partially-bypassed setups across the team's services; mentored a backend engineer who independently replicated the pattern across two more services within two weeks.
- Acted as de facto product owner/BA on a team without one — authored the majority of the team's 900+ Jira tickets and gathered requirements from company leadership and auction-floor managers, including on-site observation at live auctions and in the equipment yard.

Sojourn Creations LLC, Co-Founder & Full Stack Engineer

May 2023 – Oct 2025

- Co-founded a startup building Aisop, an AI-driven multiplayer choose-your-own-adventure game (Next.js, Django, OpenAI API, custom Node.js/TypeScript socket server) — contributed to the real-time socket server, including a major architectural refactor, and multi-environment DevOps tooling (Docker Compose, Terraform/AWS).

Salish Marine Charters, Lead Full Stack Developer

Apr 2023 – May 2024

- Independently designed and built a full-stack invoicing and dispatch management application (React, Node.js, MongoDB) for a marine charter/towing business as pro bono contract work.

Coding Dojo (Colorado Technical University), Full Stack Developer & Instruction Team

Mar 2023 – Jan 2024

- Balanced a developer role with a faculty instructor role, teaching full-stack fundamentals across JS, Python, Java, and C# stacks.

TECHNICAL PROJECTS

Portfolio — Creator/Developer — psoteropulos.com — React/TypeScript/Vite with automated CI/CD deployment 2026

moodRING — Creator/Developer — music-based social app (MERN) with Spotify API integration 2022

CookBook — Backend Developer — recipe-collection app backend (Express, MongoDB, Mongoose) 2022

EDUCATION

Coding Dojo (Colorado Technical University) — Full-Stack Web Development Cert, Faculty 2024

Coding Dojo — Full-Stack Web Development Cert, Student 2022

University of Louisiana Lafayette — Mechanical Engineering (unfinished) 2007
